

MINAS GERAIS/BRASIL SUCCESSFUL CASES

INDUSTRY

ARCELORMITTAL BIOFLORESTAS

ArcelorMittal BioFlorestas produces 240.000 tons of charcoal per year from its own renewable eucalyptus forests to supply the steel industry. With over 100.000 hectares of available land, 59% is allocated for forest planting, 32% serves as environmental reserves, and 9% comprises roads and structures.

ArcelorMittal BioFlorestas is a leader in adopting sustainable management models, with a strong focus on socio-environmental responsibility and active engagement in the communities where it operates, always guided by principles of respect and dialogue.

SUSTAINABLE CHARCOAL FOR CO₂ NEUTRALITY

The eucalyptus planted by ArcelorMittal BioFlorestas provides the ideal charcoal for sustainable steel production.

In one year, the forest cultivated by the company removes approximately 2.400.000 tons of CO₂ from the atmosphere, equivalent to the emissions of 1.900.000 automobiles.
