SUSTAINABLE PROJECTS

Climate risk assessment in priority sectors in Minas Gerais

Objective: To identify, through integrated modeling, the probability of future risks and their potential impacts, resulting from climate variability associated with different scenarios of global greenhouse gas (GHG) emissions in priority sectors in Minas Gerais, in order to subsidize the decision-making by public managers and consequently reduce the effects caused on the population, such as: impacts on health and natural disasters.

Object: Hiring a legal entity to carry out climate risk assessment and development of a web environment. Services to be performed:

- carrying out an assessment of the potential impacts of global GHG emissions scenarios in the general framework of the future of the Minas Gerais economy, incorporating their effects on the agriculture, industry and mining, livestock and energy sectors;

- development of a technological solution for presenting results in a web environment. Minimum value: only carrying out an assessment of potential impacts without developing a solution"

Hiring consultancy services is estimated at R\$850,000.00.

Planning regions and priority sectors in the Minas Gerais Regional Adaptation Strategy
